3 Alternative products

Xsens offers the 4th generation MTi (MTi MkIV), an extensive product portfolio with MTis in various classes and integrations levels. The MTi MkIV product portfolio contains 7 products: 2 IMUs, 2 VRUs, 2 AHRSs and a new MTi-G.

Next to being more accurate (up to 7 times lower RMS error) and having more output options, the products of the MTi MkIV are similarly priced as the 3rd generation MTi/MTi-G. When no full AHRS capabilities are required, the MTi MkIV products are even a more cost-effective solution.

Products of the MTi MkIV product portfolio are backwards compatible with software for the 3rd generation MTi and MTi-G (core capabilities); however it is advised to upgrade to the latest software to fully benefit from the features and accuracy of the MTi MkIV. More information can be found on www.xsens.com/en/industrial-applications.

A migration document is available to ensure a smooth transition to the MTi MkIV. For more information contact Xsens or your distributor: www.xsens.com or www.xsens.com/en/support
